PROFESSIONAL SUMMARY

Software Engineer with 1 year of hands-on experience building, testing, and maintaining a production full-stack web application using React.js, Python, Flask, and REST APIs. Strong in reusable component design, state management, API integration, SQLAlchemy-based data handling, and end-to-end debugging across the frontend, backend, and database layers. Comfortable with Git-based team workflows, code reviews, and delivering features from UI to data. Experienced in using AI-assisted development tools while validating all generated code through testing and review. B.Tech graduate (CGPA 9.2).

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), HTML5, CSS3
Frontend: React.js (components, props, state, hooks), Material UI (MUI), Jotai, Vite, Responsive Design, Form Handling
Backend and APIs: Flask, REST API Design and Integration, JSON, Request Validation, API Error Handling, Authentication Concepts
Databases: SQLAlchemy ORM, Relational Database Concepts, Data Modelling, Data Validation
Concepts: Asynchronous JavaScript (Promises, async/await), Reusable Component Architecture, Debugging and Root Cause Analysis, Performance Optimization, Software Testing, SDLC
Tools: Git, GitHub, Pull Requests and Code Reviews, VS Code, Browser DevTools, PyMuPDF, AI Coding Tools (ChatGPT, Claude, GitHub Copilot)

PROFESSIONAL EXPERIENCE

Software Engineer | Crisprbits Pvt Ltd | Bengaluru, India | Jan 2026 – Present
Full-stack developer on PathCrisp, a production React and Flask diagnostic platform for PCR tests with multiple test modules and automated PDF report generation.

- Built and enhanced React.js features using reusable components, hooks, and Jotai state management, with responsive MUI-based interfaces.
- Integrated frontend components with Flask REST APIs, handling loading, success, and error states and surfacing clearer backend error messages to users.
- Diagnosed and resolved a 400 Bad Request error by tracing an unsupported parameter sent from the frontend and correcting the request payload.
- Built a patient information interface with fixed and user-editable fields, with values flowing from the UI through the API into generated PDF reports.
- Designed flexible column-name matching for Excel uploads so data import accepts multiple header formats.
- Fixed data mapping bugs in analytics logic that displayed results in the wrong order, and removed a silent fallback to enforce strict data validation.
- Fixed UI defects such as an incorrect well-selection limit display caused by case- and whitespace-sensitive string matching, by normalizing the comparison logic.
- Added Open, Delete, and Download actions and hover tooltips to the experiments table to improve usability.
- Worked with SQLAlchemy and Python backend services to support data flow between the database, APIs, and the UI.
- Generated and fixed PDF reports in Python (PyMuPDF), including dynamic text alignment based on measured label width.
- Used AI-assisted tools to speed up development, validating all generated code through testing, debugging, and review.
- Documented completed modules, fixes, and testing for internal review, and collaborated through Git workflows, pull requests, and code reviews.

Intern | Crisprbits Pvt Ltd; ZatoOrigin Pvt Ltd; Xtransmatrix Consulting Pvt Ltd; Tif Labs Pvt Ltd

- Gained practical experience in software development and team workflows across four organizations before moving into a full-time engineering role.

KEY PROJECTS

PathCrisp Diagnostic Platform | React, Vite, MUI, Jotai, Flask, SQLAlchemy, PyMuPDF

- Contributed to modules for SickleDetect, ConnexinDetect, TyphoidDetect, AMRDetect, MicroDetect, and DemoKit.
- Implemented a multi-type control-well selection UI with automatic well assignment, distinct styling, tooltips, and confirmation dialogs.
- Added a per-sample Sample Type dropdown whose value is carried into every report type generated by the backend.

EDUCATION

B.Tech, Digital Transformation | Atria University, Bengaluru, India | CGPA: 9.2
